Hi,

Agree with centralised model.

Suggest 20c per item up to 750ml and 40c for larger to incentivise domestic consumption to flow through to recycling.

A barcode/scan to automate the scanning of the collection machine is vital. Equally high impact prior education that the object should not be crushed in order for the barcode to be read. Allowing crushed items defeats the cost effective model.

Collection machines must be located in foyers of grocery stores within visibility of CCTV, not in outdoor locations or they will be damaged.

Best regards
