Sirs,

As you are probably aware, there is only one action that is going to get us right on this whole issue and that is as soon as possible to get us up to the necessary 40% New Modular Nuclear. We need a couple of these SMRs as soon as available, in each of the old peat stations, other thermal stations, cement works, smelters etc... Wind and solar power need to be carefully limited to again around 40%, as letting them go any further makes our power far, far too expensive.

Anyone telling you different, is simply telling lies.! Luckily this reality is slowly but surely sinking in Worldwide, witness the massive volte face in Japan.

I have pasted in below a link to a piece I did up six months ago for Salmon Watch Ireland. There is so much more to all this than just power generation. This link explains all in a totally integrated approach.

The most important thing is not to listen to those in the Planet Ireland Movement. They of course reckon Ireland is on a separate planate to Earth, to which we are feebly wired, like so many used to be "wired to the Moon". All we have to do to sort the Climate issue, is get rid of the Data Centres and associated Big Tech and Pharma, kill half the cows and buy a million bicycles. NO, wont hack it. !

Enjoy the read.
